PENNSYLVANIA DEPARTMENT OF AGRICULTURE

Organization and Services

FRANK P. WILLITS, *Secretary*

JOHN M. McKEE, *Deputy Secretary*

This Department is essentially a service agency created by legislative enactment to deal with administrative, regulatory, investigational, and educational problems which can best be solved through public rather than individual action. The organization provides for coordination and cooperation with the Pennsylvania State College and the U. S. Department of Agriculture. The Department operates through the following bureaus:

ANIMAL INDUSTRY:

T. E. MUNCE, *Director and State Veterinarian*

Prevents and Eradicates transmissible diseases of animals and poultry, including tuberculosis of animals in cooperation with Federal Government.

Demonstrates to veterinarians control methods for transmissible animal diseases;

Supervises vaccination for and the prevention of hog cholera, anthrax, black leg and hemorrhagic septicemia;

Protects public from unwholesome meats through ante and post mortem examinations of animals at slaughtering establishments;

Inspects, licenses and furnishes information as to breeding, soundness and conformation of stallions and jacks standing for public service;

Enforces law requiring licensing of dogs and providing for protection of livestock and people from attacks of uncontrolled dogs;

Maintains laboratory for diagnostic research and experimental projects.

PLANT INDUSTRY:

C. H. HADLEY, *Director*

Tests agricultural seeds for purity and germination, and enforces State Seed Law;

Inspects orchards, parks, farms, and plant imports for injurious insects and plant diseases;

Inspects and licenses Pennsylvania nurseries, and licenses all dealers in nursery stock;

Makes investigations for the control of injurious insects and plant diseases including field tests of insecticides, fungicides and weed killers;

Enforces laws governing apicultural practices, disease control and housing;

Places and enforces quarantines and carries on eradication campaigns against insect pests and plant diseases;

Inspects and certifies potatoes for seed purposes;

Maintains collections of insects, plant diseases, plants, and seeds, and identifies specimens.

FOODS AND CHEMISTRY:

JAMES W. KELLOGG, *Director—Chief Chemist*

Accomplishes its purpose of protecting Pennsylvania homes against harmful foodstuffs by sampling, analyzing, and bringing prosecution under the laws relating to foods and non-alcoholic drinks, including milk, cream, butter, ice-cream, eggs, sausage, fresh meats, soft drinks, fruit syrups, vinegar and kindred food products;

Regulates and issues licenses for the manufacture and sale of oleomargarine;

Licenses and regulates egg-opening plants and cold storage warehouses, maintaining regular inspection and enforcing twelve-month storage limit;

Inspects milk plants and creameries and regulates weighing, testing, buying and selling of milk and cream on a butterfat basis;

Protects honest manufacturers, importers, selling agents and ultimate users of feeding stuffs, fertilizers, lime products, linseed oil, paint, putty, turpentine, insecticides and fungicides, by means of annual registrations followed by inspections, analyses, prosecutions and the publication of the analyses of these products;

Analyzes special samples for residents of the State at the rate of \$1.00 a sample for feeding stuffs, lime products and linseed oils.

MARKETS:

P. R. TAYLOR, *Director*

Investigates and assists in the marketing of farm products; at present chiefly grain and hay, fruits and vegetables, poultry and eggs, and tobacco;

Compiles and distributes daily market information as to supplies, shipments and prices;

Advises growers on transportation of agricultural products;

Assists cooperative associations and public markets;

Establishes standard grades of farm products and maintains inspection.

STATISTICS:

L. H. WIBLE, *Director*

Assembles and disseminates essential statistics and facts pertaining to the agriculture of the State, from monthly reports rendered by hundreds of volunteer crop correspondents, information which assists the producer in his sales and interests all industries which deal with agricultural products;

Cooperates with U. S. Bureau of Agricultural Economics in joint crop and livestock reporting and publishes annual and monthly summaries of the data;

Compiles dates of county and local fairs and assembles data pertaining to their success and results during each year.

LETTER OF TRANSMITTAL

PENNSYLVANIA DEPARTMENT OF AGRICULTURE

Bureau of Foods and Chemistry.

Harrisburg, April 21, 1926.

Hon. F. P. Willits,
Secretary of Agriculture,
Harrisburg, Pa.

Dear Sir:—I have the honor to transmit herewith for your approval a report showing in tabular form the results of chemical analyses and microscopical examinations of the official samples of Feeding Stuffs which were selected by the Special Agents from retail selling Agents and Manufacturers throughout the State and analyzed by this Bureau during 1925, as required by the Feeding Stuffs Law, Act of May 3rd, 1909, as amended May 11th, 1921, and March 19th, 1923.

It is recommended that this report be published in bulletin form for distribution.

Very respectfully,

JAMES W. KELLOGG,
Director-Chief Chemist.

FEEDING STUFFS REPORT

1925

INTRODUCTION

The Feeding Stuffs Law, Act of May 3, 1909, amended May 11, 1921, and March 19, 1923, requires all Commercial Feeding Stuffs to be registered annually; all sacks or attached cards to be printed with brand names, names of Manufacturers or Importers, guarantees for protein, fat and fiber, and statements of composition or lists of ingredients; prohibits misbranding and adulteration and provides for enforcement by means of examination of official samples and inspection of methods of sales.

During the year, Special Agents of the Bureau visited Manufacturers and Selling Agents throughout the State and obtained 1110 official samples of Feeding Stuffs, which were submitted for examination, together with reports covering each, showing the methods of labelling and sale conditions.

Of the total number received, 151 represented non-registered brands, 23 of which were whole grain chops or mixtures not requiring registration, leaving 959 official samples, which were analyzed and examined microscopically for the purpose of determining correctness of guarantees and adulteration or misbranding. They represented 637 different kinds and brands, registered by 241 Manufacturing and Importing firms. They included 62 samples of Oil Meals, 30 of Dried Grains and Corn By-Products, 197 of Wheat and Rye Mill Feeds, 18 of Oat Feed, Alfalfa Meal and Dried Beet Pulp, 28 Miscellaneous and Chop Feeds, 578 of Proprietary Mixed Feeds and 46 samples of Animal By-Product Feeds. The classification of the different brands represented, together with the number of samples examined and also those deficient in each class, will be found in Table I.

The Feeding Stuffs registered for 1925 sales included 3124 different kinds and brands, for which 1116 licenses were issued to 918 Manufacturing and Importing firms, authorizing the sale of the Feeding Stuffs registered. These figures are slightly lower than for 1924, which included 3180 kinds and brands. The list of registered feeds for 1925 is not included in this report because the feeds registered for 1925, prior to and up to April 1st, which numbered 2720 kinds and brands, were included in the report for 1924 and also as the expense involved did not warrant the republication of the list with the comparatively small additional number of brands subsequently registered.

In addition to the official samples obtained by the Agents, 687 special samples were submitted for analysis by residents of the State, together

with the required fees, as provided by the Law, and reports of the results secured were promptly mailed, together with replies to inquiries regarding guaranteeing and labelling. The fees received were paid to the State Treasurer as required. As these special samples were submitted for the purpose of private information, the results of analyses are not included in this report.

CONCLUSIONS

In order to determine the correctness of guarantees for protein, fat and fiber and statements of composition, as well as for the presence of prohibited products, the 959 official samples, which represented registered brands, were subjected to chemical analyses and microscopical examinations. Of this number 917 represented shipments which were guaranteed and labelled with the required information. Those not so labelled included mixtures of whole grains not requiring labelling and a few others where the guarantees were not shown.

Of those samples selected from guaranteed shipments, 60, or 6.5 per cent., were found to be deficient in either protein or fat or both of these food nutrients to the extent of 1 per cent., or .50 per cent., or more respectively. Compared with the deficiencies reported for the three preceding years' inspections, this proportion of deficiencies was less than that found in the samples examined during 1924 of 7.3 per cent., in 1923 of 12.3 per cent., and in 1922 of 8.2 per cent. The total number of samples deficient in protein alone was 27, or 2.9 per cent., and there were only 2 which were deficient in both protein and fat. Those found to be deficient in fat alone numbered 33, or 3.6 per cent.

More than one-half, or 578 of the samples, represented Proprietary Mixed Feeds, composed of two or more ingredients, and designed for dairy, stock, horse, mule, swine and poultry feeding. They included 163 Dairy Feeds, 110 Horse and Mule Feeds, 4 Calf Meals, 10 Swine Feeds, 120 Scratch Feeds and 113 Mash Feeds, and represented practically the same number of brands in each class, as will be noted in Table I. Of these Mixed Feeds, 398, or 68.9 per cent., of them were found, upon microscopical examination, to have been correctly labelled as to composition and were "as certified." This proportion of mixed feeds with correct compositions show a considerable improvement in this respect compared with those examined during 1924, of which 58.9 per cent. of them were found to be "as certified." Of the 180, or 31.1 per cent., of the samples which were not found to have the correct compositions as claimed for them, the variations consisted for the most part of the absence of a few named by-products, the presence of additional ingredients, the absence of salt and the presence of a small amount of whole weed seeds. No prohibited products or adulterants were found in any amounts in these mixtures. Of the Dairy Feeds,

approximately one-half of them were found to have incorrect compositions. In the case of the Horse and Mule Feeds 89 of the 110 were "as certified." Of the Scratch Feeds 94, or about three-fourths of them, were "as certified" and of the Mash Feeds 78, or about two-thirds of the samples, were found to be "as certified," the balance of these mixtures failing to be correctly labelled for the ingredients of which they were composed.

While in most of those brands in which the compositions were incorrectly stated and where the guarantees for the food nutrients were sustained, there probably were no serious decreases or losses in feeding value, yet, on the other hand, where one or two ingredients of high nutritive value are left out of the formula, there is a lowering of the feeding value of such mixtures. Those brands of feeds which consistently are found to not include a claimed ingredient may be looked upon with suspicion as not having a uniform degree of digestibility and nutritive value. Feeders of livestock, therefore, who are familiar with the unfavorable results of feeding mixtures which are not uniform in their formulas, will do well to purchase those brands which consistently from year to year are found to be correctly guaranteed and which are prepared by those firms who spare no effort to put into their formulas every ingredient they claim to use.

The results of the year's inspection, judging from the official samples examined, showed a decided improvement in the method of guaranteeing, compared with the results noted for the three preceding years. There was a noticeable decrease in the number of deficiencies in protein and fat found in the brands sold during 1925 as well as a marked increase of 10 per cent. in the case of those mixed feeds for which the compositions were correct and which included all of the ingredients claimed.

The average retail selling prices for the classes of feeds represented by the larger number of samples, which may be considered as showing for these classes a larger proportion of sales than those where only a few brands are included, were, as a rule, higher than the values reported for 1924. The average retail prices for the Proprietary Dairy Feeds, Scratch Feeds and Mash Feeds were \$51.25, \$66.91 and \$73.47 a ton, compared with the respective estimated average values of \$49.49, \$55.26 and \$66.85 a ton for these classes reported for 1924. The average retail price for Cottonseed Meal was \$55.02 a ton, compared with \$58.82 a ton reported for 1924 sales. The average retail value of the Meat and Bone Scrap Feeds was \$81.66 for 1925 and \$86.44 for 1924.

The Classification of Samples Analyzed and the Summary of Deficiencies, showing the number of samples in each class of Feeding Stuffs, received and analyzed will be found in Table I, the Average Analyses and Retail Prices in Table II and in the large Table III will

be found the results of chemical analyses and microscopical examinations in detail for each sample examined, together with brand and trade names, names and addresses of Manufacturers and Importers and Selling Agents according to classification.

ACKNOWLEDGMENTS

Mr. V. B. Hausknecht, First Assistant Chemist, in charge of the laboratory, had immediate supervision of the analytical work, and Mr. H. E. Gensler, Assistant Chemist and Micro-Analyst, had charge of the reception of all official samples, examined each sample microscopically and made duplicate analyses and check determinations where required. The following Assistant Chemists took part in the chemical analyses: Messrs. G. J. Kuhlman, Jr., Claude R. Engle and R. L. Houtz. The samples were prepared for analysis by W. W. Cassel, Laboratory Assistant. The registration of the Feeding Stuffs was in charge of W. E. Huber, Bureau Secretary.

KEY TO TABLES SHOWING ANALYSES OF OFFICIAL SAMPLES

Each sample received was analyzed for moisture, protein, fat and fiber and examined microscopically in order to determine the correctness of guarantees and lists of ingredients and for the purpose of detecting the presence of inferior or prohibited materials. The results of chemicals and microscopical examinations are included in Table III, according to classification shown in Table I. Where 2 or more samples of the same class or kind are included the results of analyses and retail selling values were averaged. The brand names, names and addresses of Manufacturers, Importers and Selling Agents are shown in alphabetical order under each classification. In addition to the results of analyses the guarantees found printed upon sacks, attached cards or upon cards attached to bins where

bulk sales were made, together with guaranteed compositions, are also shown. In those cases where the protein was found to be 1 per cent. or more below and the fat .50 per cent, or more below the guarantees, they were considered deficient. Each sample was given a number, which are shown in the first and last columns.

The several classes of feeds will be found in Table III under the following general headings and sub-headings:

OIL CAKE MEALS including Cottonseed Meal, Cottonseed Feed, Old Process Linseed Oil Meal and Cocoanut Oil Meal.

DISTILLERS' and BREWERS' BY-PRODUCTS including Brewers' Dried Grains.

MAIZE BY-PRODUCTS including Corn Gluten Meal, Corn Gluten Feed, Hominy Feed and Corn Feed Meal.

WHEAT OFFALS (With and without Ground Grain Screenings) including Wheat Bran, Mixed Feed:—Wheat By-Products, Standard Middlings, Flour Middlings, Brown Shorts, Gray Shorts, White Shorts and Low Grade Flour.

RYE OFFALS (With Ground Grain Screenings) including Rye Middlings.

WHEAT AND RYE OFFALS including Wheat and Rye Middlings.

OAT BY-PRODUCTS including Oat Feed.

ALFALFA MEAL.

DRIED BEET PULP.

MIXED FEEDS: PROPRIETARY AND MISCELLANEOUS including Proprietary Dairy Feed, Proprietary Stock, Horse and Mule Feed, Proprietary Calf Meal, Proprietary Swine Feed, Proprietary and Miscellaneous Chop Feed, Miscellaneous Feed and Proprietary Poultry Scratch and Mash Feed.

ANIMAL BY-PRODUCTS including Meat and Bone Scrap, Fish Scrap, Tankage, and Poultry Bone.
